On July 8th, 2016 Jason Miller attended the New Student Orientation as a representative of the Mathematics STAIRSTEP program. He manned the table along with representatives of the Physics and Computer Science STAIRSTEP program. There were informative handouts on the related degrees and STAIRSTEP itself that were available for interested students and parents. The Physics and Computer Science sections also had hands-on demonstrations of their respective fields.

The majority of students who approached the table were interested in the fields of computer science or engineering. Some were considering dual majors or minors in the fields represented by STAIRSTEP, like Physica and Math. The number of students intending to pursue a math degree in particular were much fewer, but the overlap of mathematics and other STEM disciplines meant that nearly all of them showed interest. Several parents requested information on behalf of their children and took pamphlets and hand-outs.

Over the course of the event, there was a large amount of interest in STAIRSTEP. Even if only a fraction of the students who stopped by the booth continue to show interest in joining STAIRSTEP, there would still be a large pool of students to approach.
