Quiandra Grant and I visited a General Chemistry II course at Lamar State College Orange on April 23, 2013. There were 12 students in the class with a variety of majors including Environmental Science, Kinesiology, Biology, and others. We decided to make the visit semi-informal by holding a round-table style discussion. This seemed to really help the students feel comfortable involving themselves in the discussion, as opposed to other visits I’ve attended where we do a formal power point presentation. Keke and I spent about five minutes telling the students about ourselves, the Chemistry department at Lamar, and some of the organizations they can find there; the rest of our time, approximately 20 minutes, was spent answering different questions from the students. Keke told me that the visit was a lot different than what she was expecting, and that she was a lot less nervous standing in front of the students than she thought she would’ve been. The professor at LSCO was a very polite man who seemed genuinely interested in who we were and delighted that we were willing to come speak to his students. I have no suggestions on improving this event because everything about it ran very smoothly.
