Your Future

Psychology is the scientific study of behavior and mental processes and relates to every aspect of human activity. Understanding and predicting behavior are useful skills in a rapidly changing society. Our program provides a versatile and adaptable education. The diverse coursework includes statistical data analysis approaches, research design, computer familiarity and technical writing skills - all of which are valuable for employment in business and industry.

As a student in the Department of Psychology, you will study how people individually and collectively develop, cope and thrive in the modern world. You will study psychological theories, apply them in your own life, and consider ways that you can take what you learn to better the world through action. We build your theoretical knowledge of psychology through traditional learning; we tap into your own insights and wisdom through reflection; and we build your skills through application. This approach prepares your mind and your heart for a host of careers that develop positive environments and outcomes for yourself and others.

Degrees and programs

Bachelor of Science (B.S.)
Psychology

Bachelor of Arts (B.A.)
Psychology

Graduate Programs
Applied Psychology (M.S.)
