#### Summary of Continuous Improvement Efforts since Last Report

*Provide a brief description of how assessment results have been used for program improvement. Point to a specific example of how an assessment provided the program with data it could use for improvement and what that improvement was, if possible, also show evidence of the improvement. You may look at data from the two previous academic years to support this case.*

Respond here:

The data demonstrates students understand and value professional ethics within supervised practice setting. Strategies to increase the achievement target to 100% will be implemented for the AY 22-23. Due to nature of professional ethics within the field of Nutrition & Dietetics, all students should score a 3.0 or better in every supervised practice experience. These strategies included a detailed orientation week with topics covered on professionalism and ethics within the workplace such as confidentiality. Trainings offered by the Academy of Nutrition & Dietetics were covered with preceptors to identify areas of concern within intern's professional dispositions. Data will be gathered in the 22-23 cycle to determine if the additional training helped students understand professional ethics and how ethics plays a role in the field of nutrition & dietetics. The data also demonstrates students can translate evidence-based literature through the process of a systematic literature review into a professional presentation. Students scored 90% or higher on the rubric indicating an above average achievement of the target measure. The target measure will be increased to 95% for the 22-23 program year.

The program goals are: 1. Graduates will be competent as entry-level registered dietitian nutritionist in evidence-based practice upon program completion. 2. Graduates will implement evidence-based practice guidelines and effectively serve clients at the personal, family, community, and global level. Data supports students can translate evidence-based literature into a professional presentation. Data also suggests students practice professional ethics in supervised practice. The program plan to implement more instruction related to professional ethics and began process of developing professional program dispositions.

Program progress has been made through the implementation of additional materials regarding professional ethics in orientation and program dispositions are in the development process for implementation in the 2022-2023 academic year. Monitoring and assessment regarding program dispositions will begin in 2023-2024.

#### Program Highlights Since Last Report

*Identify and briefly discuss any programmatic curriculum changes made since the last report (e.g. new courses, course changes, SLO changes, course deletions).*

Respond here: Curriculum changes have not been made within the courses for the 21-22 program year. For the 22-23 program year, changes will be made to the 5388 course to include monitoring and assessment regarding program dispositions.
